METERING BASICS   BASICS

This course covers the basics of meter technology. Participants will learn about the ecosystem of energy metering, what advantage energy metering provides, what kind of energy can be measured, and about the future development in meter technology.
The technical basics will be covered independently of specific Landis+Gyr products.
Participants will know and understand the why of energy metering, how energy is measured from a technical and an economical point of view, and will get a first overview of the Landis+Gyr metering product portfolio.

Target Group	Employees working in the metering industry who need to acquire basic knowledge on meters and meter technology.
Requirements	none
Content	- Introduction in energy metering - Basic terms of electrotechnology - Some types of meters - Introduction in metering technology - Meter communication - Remote data readout - Advanced metering management systems - Smart Metering and Smart Grid
Duration	1 day
Training Materials	Training documentation
Additional Information	Required training infrastructure will be provided.
Certification	Attendance Certificate handed out at end of training
Other Trainings	Technical introduction trainings for all Landis+Gyr products and solutions
